

Geology

of Bald Hill Reserve & Surrounds, Kyneton

The Friends of Bald Hill Reserve, together with the North Central Catchment Management Authority (CMA), invite you to join us for a morning with renowned Geologist, Phil Dyson. Phil will give an informative presentation and lead a walk to explore the geological features of the reserve.

When: Saturday, 27 May 2017, 9:30am - 12:30pm

Where: Bald Hill Reserve (commencing at Kyneton Clay Target Club Rooms)
281 Pipers Creek Road, Kyneton 3444

Bring: Please dress appropriately for the weather and for an outdoor event, including long pants, coat, hat and enclosed footwear.

RSVP: Registration for this event is essential by contacting the North Central CMA reception on (03) 5448 7124. Please provide details of any dietary requirements at registration.

~ This is a FREE event with morning tea and light lunch provided ~

For safety reasons, this event is not suitable for children under the age of 12.

Phil Dyson is geologist specialising in hydrogeology and geomorphology. His interest is in understanding the geological processes that transform rocks into soils and landforms, and in turn how the terrain supports our rivers and ecosystems, groundwater systems, and agriculture activities. In a long career as a hydrogeologist and geomorphologist, Phil has a background in scientific applied research. He has worked extensively with regional communities and Landcare groups and currently manages the North Central CMAs project 'Farming for Sustainable Soils'.

This event is supported by the North Central CMA's Kyneton Woodlands Project, with funding from the Australian Government.
